Mastering Brain Chemistry™

A training program for medical doctors to better manage mental health

Through lectures and real patient assessments, this training program will enable you to confidently evaluate laboratory testing, diagnose biochemical imbalances and equip you to design effective, individualised treatment programs for your patients.

About the training

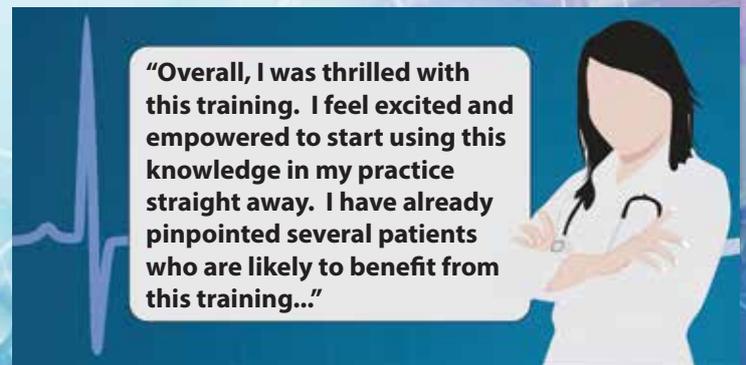

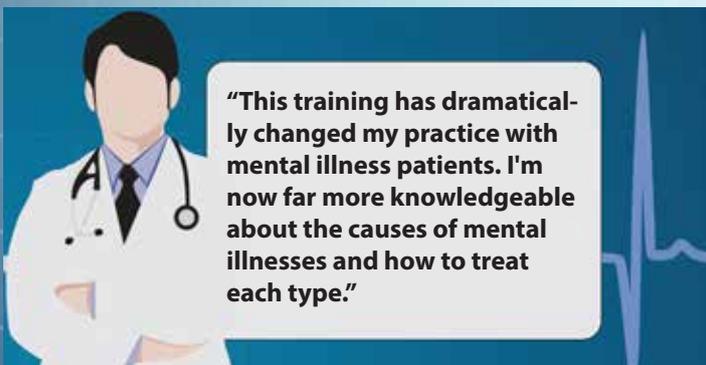

Mastering Brain Chemistry is a 5 day intensive syllabus for medical doctors presenting the power of nutrients to improve neurotransmitter function. The program provides a greater understanding of the biochemical imbalances commonly associated with mental illness, which, when combined with current treatment options, improves patient outcomes.

Bio Balance Health and the Walsh Research Institute have been running this training annually for registered Medical Doctors since 2004.

Interactive sessions with world class experts and live patient cases, allow you to see and learn, in real-time, the evaluation and diagnosis of patients with mental health and behavioural disorders. As an attendee you get to experience these real-time patient assessments throughout the training.

What you will learn

- **Nutrient imbalances commonly associated with mental health**
- **Specialised Laboratory testing to provide individual biomarkers of Biochemistry**
- **Effective nutrient protocols aimed at normalising blood/brain chemistry**
- **The role of epigenetics in mental health**
- **How to treat zinc deficiency, copper overload, histamine and folate imbalances, oxidative overload and other chemical imbalances**
- **How to apply the protocols in your own practice using Australian resources**

About Bio Balance Health

Bio Balance Health's primary aim is to promote the benefits of comprehensive individualised biochemical assessment and advanced nutritional treatments for mental health and behavioural disorders.

Bio Balance Health supports, on a not for profit basis, the training of doctors in Australia and actively promotes and funds world class original research at recognised quality universities.

About the Walsh Research Institute

The mission of the Walsh Research Institute is to bring the benefits of advanced biochemical therapy to millions of persons challenged by ADHD, schizophrenia, bipolar disorder, anxiety, clinical depression, behavior disorders, autism, and neurodegenerative disorders, conduct research studies into a range of mental disorders and train doctors around the world in advanced, drug-free biochemical treatment of these disorders.

William J. Walsh PhD

William J. Walsh, PhD, FACN, is the founder and president of the non-profit Walsh Research Institute. He directs physician and practitioner training programs internationally and he has trained over 300

Australian Doctors through the annual training with Bio Balance Health.

An Internationally recognised expert on biochemical imbalances, Dr. Walsh has devoted over 40 years to researching the biochemistry behind behavioral disorders, learning and memory, mental health and various disease conditions. He developed science based, advanced nutrient therapies that have helped thousands of patients challenged by behavioural disorders, Depression, Anxiety, Schizophrenia, ADHD, Autism and Alzheimer's disease, and are used by doctors all over the world. www.walshinstitute.org

Patient Assessment Program

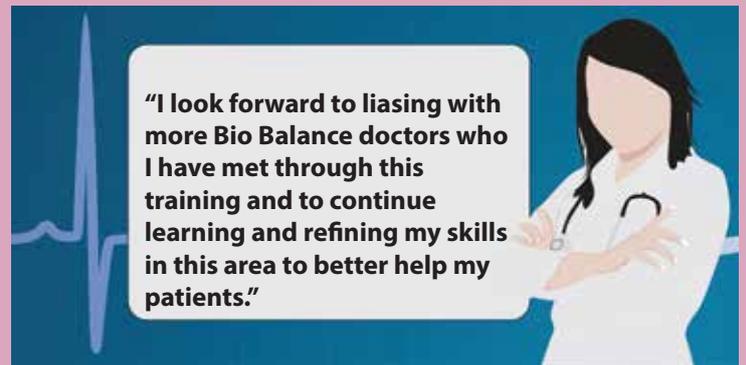

Within the medical doctor program

During the week long medical doctor training there are also a number of patients who can also take part as case studies.

Patients and families have reported that nutritional treatment to correct their biochemical imbalances have produced significant improvements in

- ADD, ADHD and Behavioural disorders
- Post-Natal Depression
- Autism Spectrum Disorder
- Schizophrenia
- Bipolar Disorder
- Depression
- OCD

Patients must register and complete several steps before being accepted as a case study for the annual training. To register please contact Bio Balance Health.
